#### Terms and conditions

- (A) Electrical storage appliances for heating the building or electrical storage appliances for heating the utility water must be properly installed in the withdrawal site.
- (B) The consumer will ensure the technical blocking of the electrical storage appliances during times when the high tariff applies.
- **(C)** Electrical storage appliances must be properly installed in the withdrawal site for heating the building.
- (D) The total installed input of the electrical storage appliances must be at least 55 % of the input corresponding to the value of the main circuit breaker installed in front of the electricity meter in the withdrawal site. The distributor shall grant the consumer this tariff even if the total input of the electrical storage appliances amounts to less than 55 % of the value of the main circuit breaker installed in front of the electricity meter, provided that the consumer demonstrates that the electrical output of the electrical storage appliances corresponds to the thermal losses in the given heated building.
- **(E)** Hybrid (mixed) electrical appliances must be properly installed in the withdrawal site for heating the building.
- (F) The total installed input of the hybrid (mixed) electrical appliances, including the installed input of the storage appliances for the heating of utility water, if such are installed, must be at least 50 % of the total installed input corresponding to the value of the main circuit breaker installed in front of the electricity meter in the withdrawal site. The distributor shall grant the consumer this tariff even if the total input of the hybrid (mixed) heating electrical appliances amounts to less than 50 % of the value of the main circuit breaker installed in front of the electricity meter, provided that the consumer demonstrates that the electrical output of the hybrid (mixed) heating electric appliances corresponds to the thermal losses in the given heated building.
- **(G)** If there is an electrical storage appliance for heating utility water installed in the withdrawal site, this appliance will be subject to the conditions of the C25d rate.
- **(H)** The consumer will ensure the technical blocking of the storage parts during times when the high tariff applies.
- (I) Direct electrical heating appliances must be properly installed in the withdrawal site for heating the building.
- (J) The total installed input of the direct heating electrical appliances, including the installed input of the storage appliances for heating utility water, if installed, must be at least 40 % of the total installed input corresponding to the value of the main circuit breaker installed in front of the electricity meter in the withdrawal site. The distributor will grant the consumer this tariff even if the total input of the direct heating electrical appliances amounts to less than 40 % of the value of the main circuit breaker installed in front of the electricity meter, provided that the consumer demonstrates that the electrical output of the direct heating electrical appliances corresponds to the thermal losses in the building being heated.
- (K) The consumer will ensure the technical blocking of the electrical heating appliances during times when the high tariff applies.
- (L) The rate for heating with a thermal pump put into operation by 31 March 2005. Putting into operation refers to concluding the first contract on delivery, the distribution of electricity or a contract on affiliated services of an electricity delivery at this rate.
- (M) The rate is intended for withdrawal points where the consumer credibly demonstrates that for heating the building there is a system of heating with a thermal pump properly installed, the output of which corresponds to the thermal losses of the heated building.
- **(N)** The heating system with thermal pump must be connected by independent input and measured by independent measuring equipment.
- (0) The consumer will ensure the technical blocking of the electrical heating appliances, apart from the compressor of the thermal pump, during times when the high tariff applies.
- (P) The rate for heating with a thermal pump put into operation by 1 April 2005. Putting into operation refers to concluding the first contract on delivery, the distribution of electricity or a contract on affiliated services of an electricity delivery at this rate.
- (R) The tariff is intended for withdrawal points where the consumer credibly demonstrates to the distributor that the building in question is heated using a properly installed and used heating system with a thermal pump.
- (s) The thermal output of the thermal pump covers at least 60 % of the thermal losses of the heated building.
